

Drip Tape Extraction Sled

This tractor mounted tool is the answer for those growers who want to reuse their drip tape, and who need to extract the tape from subsurface installation or through growing or lodged crop cover. A unique control system automatically matches extraction speed to tractor speed. This controlled tension, gently extracts tape through soil or crop vegetation. The extractor's modular design and

tool bar mounting allows it to be used as a single unit, or mount several on a single tool bar for multiple line extraction. The pneumatic pulling tires gently squeeze all water out of tape and lay it down on the surface to await end-of-row retrieval.

Your Andros Engineering Dealer can provide an extraction sled that will fit your current irrigation and cultural practices, or let them design a complete installation and retrieval system built from a complete line of installation, extraction and retrieval tools offered by Andros Engineering.
