

Drip Tape Extractor

This tool was designed for the vegetable grower who wants to re-use subsurface or surface applied drip tape. The extractor's modular design and tool bar mounting allows it to be used as a single unit or mount several on a single tool bar for multiple line extraction. A unique control

system automatically matches extraction speed to tractor speed, and controls pulling tension, gently extracting tape through soil or crop vegetation. The pneumatic pulling tires gently squeeze all water out of tape and lay it down on the surface to await end-of-row retrieval.

Your Andros Engineering Dealer can provide extractors as stand alone units for mounting on your tool bar or as part of a complete extraction system designed to meet your specific crop and row spacing requirements.
