

End-Of-Row Retrieval Trailer

RT0801-001 14' 4 Row Retrieval Trailer

RT1001-001 14' 2 Row Retrieval Trailer

End-of-Row Retrieval Trailers from Andros Engineering have earned a reputation as dependable workhorses in any retrievable/reusable drip tape system. Designed to retrieve any type or size of tape, these machines have proven their value to growers by providing years of dependable service under the harshest conditions.

Available in four or two head configurations, these trailers provide the power, control and storage necessary for both large and small growers. An overhead racking system provides ample storage for empty Agri-Spools and a spacious perforated deck allows for drainage and storage of full reels. Optional air pumps for blowing drip lines and a self-contained hydraulic power supply make this system adaptable to the equipment requirements of virtually any drip tape user.

Proven features that make this retrieval trailer the leader in its field include:

- Ergonomically designed controls reduce labor and increase efficiency
- Individual speed control at each head
- High-torque high speed motors and large heavy-duty bearings carry the workload ensuring maximum lengths of tape on each reel.
