

# Universal Retrieval Head for Reuse

As an Andros dealer you can now order Retrieval Heads to meet your customer's exact requirements.

RH0601-003 Junior Head Series 3

The Retrieval Head shown here and described by part number above, represents a unit typical of users on smaller acreages who want to retrieve tape from the field for reuse. This retrieval head works well mounted on a simple toolbar, behind a small tractor with auxiliary hydraulics. Used in conjunction with our 18" or 24" Agri-Spools any tape user can now effectively reuse drip tape and greatly reduce the overall cost of their irrigation system. This simple cost effective machine can be easily upgraded to include features such as automatic levelwind, drop tables for larger Agri-Spools (24-inch) and trash spools option for tape disposal.
