

# Universal Tape Splicing Station

**ST01-001 Universal Tape Splicing Station**

The Andros Universal Driptide Splicing Station is designed for repairing/joining new and reuse driptide. This flexible device allows growers to maximize their driptide investment. Typical scenarios for growers in the past was to discard remaining unused tape from factory rolls, in addition wire tying reuse tape which eventually punctures and creates leaks. Now with the emergence of the AEC 700 Series Coupler and portable driptide heat splicer's, growers now have a choice in methods to permanently repair/join tape, additionally winding used and new product on a reusable tape spool using Andros Equipment.

- Electronic outlets for accessories
- Linear tape counter
- Rotating Double Spool Carrier for easy loading and unloading.
- Universal Retrieval Head
- Collapsible for storage
- Forklift receivers for transport
- Coupler accessible tensioning device
- Hydraulic pump
- Work tray
- Battery and Battery Charger
- All steel construction
